

Study Jam

TinkerHub Vibe Coding Study Jam— Event Report

Event Name	Vibe Coding Study Jam by Amal Kakkat
Organized By	TinkerHub SBCE Pattoor
Date	05 August - 06 August
Time	7:00 PM - 8:00 PM
Venue	Online

Event Overview

Day 1: Introduction to vibe coding was organized and conducted by Amal. It provided knowledge about advantages and concepts of vibe coding along with a live demo to give hands-on experience for the attendees.

Day 2: Using the knowledge acquired on day 1 the attendees were able to build and showcase their own working application. Some of the interesting applications built during the event are Dino game, Angry Birds game, Attendance calculator and Complete College Bus Tracking system, a Simple AI Chatbot.

The event witnessed a great turnout prior to the commencement with around 39 registrations and took the participants through a journey from the basics to building their own apps.

"Where creativity meets artificial intelligence to generate amazing applications from simple ideas. "

Objectives

- Hands-On Tooling: Introducing participants to core development tools like VS Code, Python, and Git, equipping them with essential setups for modern software workflows.
- Flexible Help: Providing technical assistance to students who are using different tech stacks, or working with other languages and/or frameworks, such as Flutter, etc.
- Prompt Engineering: Teaching students how to phrase their prompts to achieve the best results.
- Vibe Coding: Demonstrating how to combine prompt engineering with traditional coding to develop applications quickly and efficiently.
- Learning-Based Teaching: Holding an interactive and student-focused lecture, based on the actual skills of the students, focused on the actual task of coding, building apps.

Total responses and registrations

Outcome

- **Practical Project Development:** All attendees built one or more fully functioning applications with an AI-assisted coding approach. We built an interactive Dino game, Angry Birds game, an Attendance Calculator, and a Bus Tracking System, SMARTCR etc.
- **Prompt Engineering Proficiency:** Attendees gained valuable insight in engineering prompts to unlock the power of large language models such as Claude to generate and debug code.
- **Environment & Tool Familiarization:** Students became comfortable in development environments such as VS Code, Python, Git Bash, and development frameworks like Flutter etc.
- **High Student Engagement:** High demand was witnessed as 39 students registered for the event, and more than 15 students attended the first run of the event.
- **Increased Confidence And Competence In Coding:** All attendees left the session with working applications to add to their portfolios and a new practical approach to AI-assisted software development.

Conclusion

Amal's Vibe Coding Study Jam was a hands-on, collaborative experience that brought the TinkerHub SBCE community together to explore software development. Through step-by-step guidance and AI prompting, students built real-world applications using tools like Python and VS Code. The session boosted student confidence, fostered peer-to-peer learning, and set a strong precedent for future TinkerHub innovation initiatives.
