

Aadambaram

Reimagine Your Campus with AI — Event Report

Event Name	Aadambaram
Organized By	TinkerHub SBCE Pattoor
Date	26 July 2026
Time	Open submission period
Venue	Online

Event Overview

Aadambaram was an AI-powered campus redesign challenge organized by TinkerHub SBCE Pattoor to encourage students to explore the creative potential of artificial intelligence. The idea for the event was proposed by a member of the TinkerHub community with the intention of creating an opportunity for students to combine technology, creativity, and imagination.

As part of the competition, participants were provided with a photograph of the college's main block and were challenged to redesign it entirely from scratch using AI-powered tools. Students transformed the familiar campus landscape into futuristic cityscapes, sustainable architectural structures, technologically advanced environments, and imaginative worlds inspired by their own unique perspectives.

The competition encouraged participants to experiment with various AI tools while learning the fundamentals of prompt engineering, design thinking, and visual storytelling. Participants explored innovative ways of communicating their ideas and discovered how artificial intelligence can be used as a medium for artistic expression and problem-solving.

The event received enthusiastic participation from students across different semesters and departments. Numerous creative submissions were received, each presenting a distinctive interpretation of the campus. Following the submission phase, the entries were carefully evaluated based on originality, creativity, presentation, and execution.

The event concluded with the announcement of the winners, whose submissions stood out for their exceptional creativity, technical execution, and innovative ideas.

"Reality gives us a foundation, but imagination gives it a future.

Between what is and what could be lies the beauty of creation"

Objectives

- To encourage students to explore the creative possibilities of artificial intelligence.
- To introduce participants to AI-powered image-generation platforms and prompt-engineering techniques.
- To provide students with a platform to express their creativity and showcase their ideas.
- To promote innovation, experimentation, and creative thinking among students.
- To encourage participants to discover new and practical applications of artificial intelligence.

Participation statistics of the event

Outcome

- Participants gained a deeper understanding of the creative possibilities offered by artificial intelligence.
- The event enabled students to discover innovative methods of transforming ideas into reality through technology.
- Participants developed a new perspective on the campus and realized the limitless possibilities that could emerge from imagination and creativity.
- Students gained practical experience in prompt engineering, visual design, and the use of AI-powered creative tools.
- The competition inspired greater enthusiasm and encouraged participants to actively engage in future TinkerHub initiatives and events.

Conclusion

Aadambaram successfully demonstrated the powerful connection between creativity and technology. The event provided participants with an opportunity to reimagine familiar surroundings and transform them into entirely new worlds using artificial intelligence.

More than a competition, the event served as a platform for innovation, experimentation, and learning. It encouraged students to explore new ideas, develop creative problem-solving skills, and gain valuable experience in working with emerging technologies.

The remarkable enthusiasm and active participation of the students contributed significantly to the success of the event, further strengthening the spirit of creativity, collaboration, and innovation within the TinkerHub community.
