

USELESS PROJECTS

TinkerHub Community Meetup—Event Report

Event Name	Useless projects 3.0
Organised by	TinkerHub SBCE Pattoor
Date	7 September 2026
Evaluator	Vishnu Vasudev
Venue	Sree buddha college of engineering

Event Overview

The Useless projects was conducted as part of the TinkerHub community activities at Sree Buddha College of Engineering. The event provided students with an opportunity to present their creative and innovative projects and demonstrate their technical skills, problem-solving abilities, and unique ideas.

The projects presented by the participants included a wide variety of creative concepts. The evaluation was conducted by Dr. Vishnu Vasudev, who assessed the projects and selected the top three projects from the college.

Top Project Picks

First Place — AI Chatbot

The first-place project was an AI chatbot designed to roast users instead of providing standard conversational responses. The project stood out for its creative and unconventional approach to chatbot interaction.

Prize: ₹1,000

Second Place — Rava Particle Counter

The second-place project was a Rava Particle Counter capable of accurately counting individual rava particles from an image. The project demonstrated the use of technology to solve a simple but interesting real-world counting problem.

Prize: ₹500

Third Place — Amal Kakkat's Team Project

The third-place project was an experimental IDE developed by Amal Kakkat's team. The project featured unusual and humorous conditions, including requiring a specific environmental temperature in Mongolia, deleting code when compilation errors occur, and requiring the user to maintain a specific decibel level of screaming while the code is running.

Objectives

- To encourage students to develop creative and innovative projects.

- To provide students with an opportunity to showcase their technical skills.
- To encourage experimentation and unconventional problem-solving.
- To promote creativity and innovation within the TinkerHub community.
- To provide a platform for students to present and explain their projects.
- To recognize outstanding student projects through evaluation and prizes

Outcome

- Successfully showcased creative student projects.
- Encouraged students to explore innovative ideas and technologies.
- Provided participants with an opportunity to demonstrate their technical abilities.
- Recognized the top three projects based on evaluation.
- Motivated students to experiment with unconventional and creative approaches to technology.
- Strengthened the culture of creativity, innovation, and project-based learning within the college community.

Conclusion

The Project Competition provided an engaging platform for students to showcase their creativity, technical skills, and innovative thinking. The diverse range of projects demonstrated the participants' willingness to experiment with new ideas and develop unique technological solutions.

The selection of the AI chatbot, Rava Particle Counter, and Amal Kakkat's team's experimental IDE as the top three projects highlighted the creativity and originality of the participants. The evaluation by Dr. Vishnu Vasudev and the recognition given to the winners further encouraged students to continue exploring innovative ideas and building interesting projects.
