TinkerHub Event — Event Report

Event Name	Ctrl + പൂക്കളം
Organized By	TinkerHub SBCE Pattoor
Date	26 August 2026 – 31 August 2026
Time	26/08/2026, 9:00 AM to 31/08/2026, 5:00 PM
Venue	Online

Event Overview

Ctrl + പൂക്കളം was an open, online coding competition organized by TinkerHub SBCE that uniquely blended festive Onam tradition with programming skills. The initiative invited participants of all experience levels to design virtual Pookalams using code.

The primary rule mandated that all visual patterns had to be generated programmatically without using pre-rendered photographs or external images. Participants were given complete freedom to use any programming language, graphics library, or development platform of their choice. The event served as a creative coding challenge, turning abstract logic, visual hierarchy, layout, and colors into vibrant digital artwork. Registrations closed before 26 August, and a cash prize of ₹500 was awarded for the top entry.

The competition was structured to encourage hands-on experimentation, bridging the gap between design theory and technical execution. Over the course of the submission window—from 26 August to 31 August—participants tackled two distinct phases of the creative process: conceptualizing the design layout and translating that vision into clean, executable code.

In the initial design phase, creators had to plan their visual hierarchy, balancing central focal points with intricate repeating borders, geometric symmetry, and festive color palettes reminiscent of traditional flower arrangements. In the implementation phase, participants brought these ideas to life by applying fundamental graphic programming concepts, such as mathematical formulas for radial patterns, dynamic CSS rendering, SVG pathing, canvas manipulation, or algorithmic generative art.

By challenging participants to take a simple concept and turn it into a well-structured, eye-catching design purely through code, **Ctrl + പൂക്കളം** highlighted the power of creative coding. The event not only celebrated cultural heritage in a modern digital format but also strengthened the problem-solving and algorithmic thinking skills of all who participated.

"Turn your imagination into patterns, your code into colours, and your creativity into a Pookalam!"

Objectives

- To encourage creative coding and artistic expression using technology.
- To provide an inclusive, open-for-all platform to explore programming fundamentals through visual design.
- To challenge participants to build complex geometric layouts and color palettes entirely out of code without external assets.
- To foster community engagement and celebrate festive traditions in a modern tech environment.

Outcome

- Successfully engaged students in a creative coding competition bridging art and technology.
- Promoted code-driven graphic creation using diverse platforms and programming languages.
- Challenged participants to apply concepts of geometry, visual hierarchy, alignment, and styling in code.
- Rewarded outstanding technical creativity with a ₹500 cash prize.
- Broadened awareness of generative art and creative coding techniques among students.
- Demonstrated the practical application of design principles—such as visual hierarchy, symmetry, and color theory—within a programmatic context.
- Encouraged self-directed learning as participants explored new programming languages, frameworks, or design libraries to execute their ideas.
- Highlighting how traditional cultural celebrations can be reinterpreted through modern digital tools and technology.

Conclusion

Ctrl + പൂക്കളം provided a novel space for participants to experiment with visual programming during the festive season. By restricting external media and highlighting pure code-based art, the competition challenged developers to rethink design through code. The enthusiasm and quality of submissions showcased how technical skills can intersect with cultural traditions, reflecting TinkerHub SBCE's commitment to hands-on, creative learning.
