

TINKERHUB SBCE PATTOOR · SESSION REPORT

Study Jam: Object Detection Using Computer Vision

A Two-Day Tech Session Initiative — Report

Event Name	Study Jam: Object Detection Using Computer Vision
Organized By	TinkerHub SBCE Pattoor
Speaker	Ashish Rajan (Tech Enthusiast, AI Explorer & Learner)
Date	15 & 16 September 2026 (Tuesday & Wednesday)
Time	08:00 PM – 09:00 PM
Venue	Online (Google Meet)
Format	Two interactive sessions: Day 1 theory, Day 2 hands-on practical

Event Overview

Study Jam: Object Detection Using Computer Vision was a two-day tech session conducted by TinkerHub SBCE Pattoor on 15th and 16th September 2026, from 08:00 PM to 09:00 PM, online through Google Meet. The session was led by Ashish Rajan (Tech Enthusiast, AI Explorer & Learner) and introduced participants to how computers perceive the visual world and identify objects, opening up possibilities in modern AI applications.

The first day was a theory session on how computers perceive the visual world and identify objects. The second day was practical: through live demonstrations on screen share, participants followed along on their own machines to set up a working Python environment for computer vision using VS Code, virtual environments and the ultralytics (YOLO) stack, and worked through setup issues together.

Both days were interactive, encouraging participation and hands-on learning. The session strengthened participants' practical skills and gave them a working first step into object detection and computer vision.

Objectives

- To introduce participants to object detection and its applications in computer vision.
- To set up a working Python environment for computer vision projects.
- To provide hands-on experience with VS Code, virtual environments and requirements-based installs.
- To troubleshoot real-world setup issues collectively during the live session.
- To build interest in AI within the TinkerHub SBCE community.
